# AtliQ Sales & CRM Assistant: AI Opportunity Map

**Process:** founder-led B2B selling at AtliQ (Bhavin, Dhaval, Karandeep, Jay), from a lead arriving on any channel to a closed or grown account. Author: Yaswanth. Data: CRM export, 34 emails, 16 meeting notes, 2 client interviews; dataset date 10 Jul 2026.

**Root cause (from 5 Whys):** capture and recall of client asks and our promises depend on the memory of the four busiest people. Kaizen works; it never hears about the conversations. On 10 Jul, 33 accounts are waiting on AtliQ and 0 of 40 CRM records have a next follow-up date.

North Star: % of client asks and AtliQ promises closed within 2 business days (target 90%)

Input | Human action | Tool | Pain point (red dots = team votes) | AI opportunity | Human role after AI

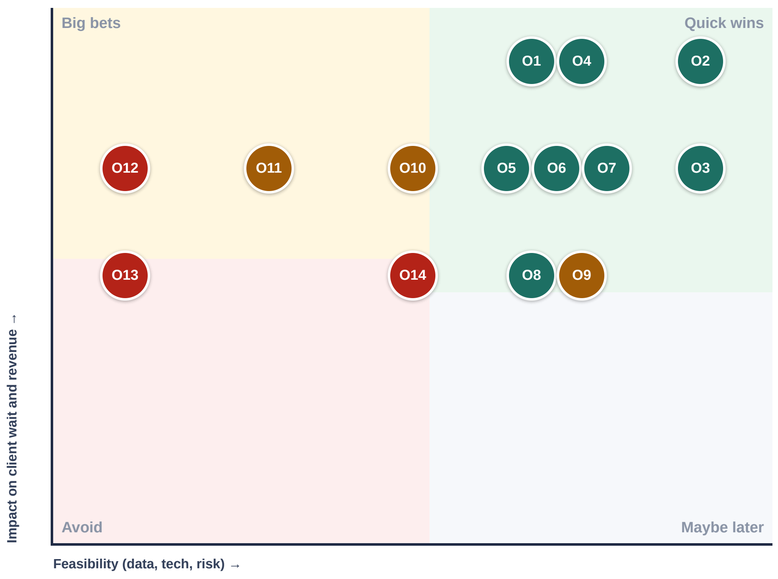

## 1. Process board: where the work happens, where it breaks, where AI fits

Steps from the founder's workflow. Pain points carry evidence from the dataset; dot votes mark the most painful steps (3, Log in CRM, and 4, Follow up).

| | **Step 1** Lead arrives | **Step 2** First conversation | **Step 3** Log in CRM | **Step 4** Follow up & answer asks | **Step 5** Discovery, demo, proposal | **Step 6** Negotiate & close | **Step 7** Grow the account | **Step 8** Revisit parked & lost | **Step 9** Pipeline review |
|---|---|---|---|---|---|---|---|---|---|
| **Input** | Referral, LinkedIn, conference card, website form, existing client, partner Slack | Call or chat, often on the fly (commute, walking) | Notes, forwarded emails | Client questions, our promises | Requirements, budget, timelines | Pricing objections, references, security questionnaires, contracts | Happy-client emails, QBRs, renewals, referrals | 'Check back in Q4', OOO replies, lost-on-price | CRM export |
| **Actions by human (today)** | Founder reads it on phone between meetings; intends to reply later | Takes call on WhatsApp / RingCentral / FaceTime; keeps notes in head | Updates Kaizen at night or delegates to Jay/Ayush; often skipped | Remembers (or not) to reply; 'will revert in a day or two' | Writes approach notes, proposals, SOWs; Pranav builds demos | Founder handles pricing; asks team for references, security answers | Promises samples/scope notes; often forgets to log the new opportunity | Relies on memory to revisit | Monthly review; Jay reconciles CRM vs inboxes for ~2 hours |
| **Digital tools in use** | Email, WhatsApp, iMessage, LinkedIn, Slack Connect, business cards in a drawer | Phone; read.ai only on Teams | Kaizen CRM (manual entry) | Inbox, memory | Docs, decks, email | Email, e-sign | Email, meeting notes | None | CRM export, inbox search |
| **Pain points (today)** | Never logged: Harbor & Finch, Lumino, PixelWorks, Nimbus not in CRM; TechSummit 15 cards, 4 entered ●●● | Context lost: Ridgeline caller left no contact; MiraHealth call details never logged ●●● | 40/40 next_followup empty; stale statuses; Meridian entered twice by two owners ●●●●● | 33 accounts waiting on AtliQ; FinEdge $95k waited 21 days; FreshCart referral chased twice ●●●●● | AgroLink proposal due 10 Jul not started; ShopSwift SOW due 15 Jul; BlueOrchid approach note never sent ●●● | Competition invisible in CRM (VoltEnergy, CloudNine, FreshCart); NovaPharma 78-question questionnaire unowned ●●●● | Cross-sells unlogged: Acme (2), Northwind, Sunrise (2), GlobalMart, PayTrack, DataNest ●●●● | Quantia asked for Q2 revisit; Vertex never reconnected; Kaveri and ClearPath came back while CRM says Lost ●●● | 'We find out what's urgent by accident'; HealthFirst board date found mid-meeting ●●●● |
| **AI opportunity (33A card)** | Extract new-lead signal from any channel; propose CRM record with quote | Voice memo after call → transcript → extraction of asks, budget, decision-maker, dates | Propose field-level updates with evidence; dedupe; derive dates by rule; human approves | Open-loop detection + daily 'who's waiting on you' + grounded follow-up drafts | Deadline tracking from client text; (later) proposal first-drafts | Competitor and stakeholder extraction; priority score uses competition; owner nudges | Cross-sell / renewal / referral classification → 'log opportunity' suggestions | Revisit-date extraction; reopen suggestions when a lost client writes back | Ranked queue with reasons; CRM health metric; Q&A over conversations with citations |
| **With Recall: what the human still does** | Founder forwards or just replies as usual; Recall files the lead | Dictates a 30-second voice memo after the call | Reviews suggested updates in one screen; taps approve | Opens the daily list; edits the draft; sends | Sees client deadlines on the list; writes the proposal | Sees competition and stakeholders per deal; decides price | Taps 'log it' on suggested cross-sells; routes to account owner | Gets the revisit on the due date with the client's original words | Starts the review from a ranked, current list; no reconciliation |

## 2. Scoring: impact vs feasibility

Impact = effect on client wait time and revenue from known pipeline (1-5). Feasibility = data available, tech maturity, risk (1-5). Score = impact x feasibility. Green = build in v1, amber = later, red = not now / rejected.

| ID | Opportunity | AI capability | Impact | Feas. | Score | Decision | Why |
|---|---|---|---|---|---|---|---|
| **O2** | 'Who's waiting on us' open-loop queue + daily brief per owner | Extraction + rules | 5 | 5 | **25** | Build v1 | Directly moves the North Star |
| **O1** | Multi-channel capture: read email, notes, WhatsApp, iMessage, Slack, call summaries, voice memos | Information extraction (LLM, structured output) | 5 | 4 | **20** | Build v1 | Root cause is capture; per-message extraction is cheap on Haiku |
| **O3** | Priority score using the CEO's rules (urgency, value, competition, relationship) | Rules (deterministic, explainable) | 4 | 5 | **20** | Build v1 | Encodes his gut; no model needed |
| **O4** | CRM field-update proposals with evidence; human approval; Kaizen export | Structured extraction + rules | 5 | 4 | **20** | Build v1 | Keeps the existing CRM, removes typing |
| **O5** | Grounded follow-up drafts (email / WhatsApp) | Generation (LLM) | 4 | 4 | **16** | Build v1 | Cuts reply effort; placeholders, never sends |
| **O6** | Missing-lead and duplicate detection | Entity resolution (rules + extraction) | 4 | 4 | **16** | Build v1 | Meridian awkwardness; 6 leads missing |
| **O7** | Cross-sell, renewal, revisit and reopen detection | Classification (LLM) | 4 | 4 | **16** | Build v1 | Same extraction pass; new signal types |
| **O8** | Ask the pipeline: Q&A with citations | Retrieval (RAG) + generation | 3 | 4 | **12** | Build v1 (light) | Replaces inbox searching in reviews |
| **O9** | Business-card / booth capture at conferences | OCR + extraction | 3 | 4 | **12** | Later (v2) | Helps TechSummit gap; extraction exists |
| **O10** | Proposal / SOW first drafts | Generation + retrieval over past proposals | 4 | 3 | **12** | Later (v2) | Needs proposal library |
| **O14** | Autonomous agent that sends follow-ups and updates the CRM itself | Agentic actions | 3 | 3 | **9** | Rejected | Client-facing errors are costly; founders must own the voice and the record |
| **O11** | Security questionnaire auto-answers | Retrieval over policies + generation | 4 | 2 | **8** | Later (v2) | Needs approved policy corpus; high stakes |
| **O12** | Record and transcribe WhatsApp / FaceTime calls automatically | Speech-to-text | 4 | 1 | **4** | Not now | Platforms don't allow recording; consent laws. Use post-call voice memo instead |
| **O13** | Win-probability prediction | Predictive ML | 3 | 1 | **3** | Not now | 40 records, no outcome history: would be noise |

## 3. What the solution should and should NOT do

### Should

- Remember every ask, promise and date from every channel, with the exact words
- Tell each owner, daily, who is waiting on them and why they rank where they do
- Draft replies that use only facts from the thread; leave gaps as [brackets]
- Propose CRM updates and let a human approve each one
- Flag missing leads, duplicates, reopened deals and unlogged cross-sells
- Say 'I can't find that' instead of guessing

### Should NOT

- Send anything to a client on its own
- Write to Kaizen without approval, or bulk-approve AI judgements
- Invent prices, dates, scope or technical answers
- Mark a deal Won before signature, or reopen a Lost deal without the client saying so
- Rank clients with a black-box model; ranks must be explainable rules
- Record calls covertly or store personal details unrelated to selling
- Replace Kaizen

## 4. Chosen features mapped to AI capability and guardrails

The model does one narrow job (extract and write with evidence). Ranking, dates and CRM writes are rules plus human approval.

| Chosen feature | AI capability | Model / rule | Guardrail |
|---|---|---|---|
| **Capture & extract signals** | Information extraction to a JSON schema (tool use) | Claude Haiku 5.5 | G1 quote-or-drop: verbatim quote check in code; G8 minimum context |
| **Waiting-on-us queue** | Rules over extracted signals | No model | G5 rules rank, with breakdown; G6 dates from evidence |
| **Priority score** | Weighted rules (40/30/15/15) | No model | G5 explainable; competition 'much lower' deprioritised per CEO rule |
| **CRM sync** | Structured extraction + rule-derived dates | Haiku 5.5 + rules | G2 human approves every change; AI fields never bulk-approved; G7 conservative stage changes |
| **Follow-up drafts** | Grounded generation | Claude Sonnet 5.5 | G3 never sends; G4 [placeholders] for unknown facts; send blocked until filled |
| **Missing leads / duplicates** | Entity resolution | Rules (email/domain/name) | G2 merge only on approval; 'keep both' option |
| **Ask the pipeline** | Retrieval + generation with citations | Sonnet 5.5 | G9 invalid citations stripped; 'can't find' when no evidence |

## 5. Ethical risk cards and mitigation

| Ethical / risk card | Category | Mitigation |
|---|---|---|
| **Hallucinated commitment or date** | Explainability / accuracy | G1 quote check; G6 dates by rule; eval: 100% verbatim quotes before launch |
| **Wrong message sent to a client** | Accountability / human control | G3 drafts only; send disabled with gaps; founder sends |
| **CRM corrupted by bad automation** | Governance | G2 approvals; change log CSV with evidence; undo |
| **Client data leaving the company** | Privacy / security | API data under commercial terms; minimum context per call; no personal phone numbers in CRM; region-appropriate hosting |
| **Recording calls without consent** | Privacy / legal | No covert recording; post-call voice memo by the seller; read.ai only where already consented (Teams) |
| **Over-trust: 'not in the queue' read as 'nobody waiting'** | Transparency | Coverage shown (channels connected, items pending); 'gone quiet' list; weekly recall eval |
| **Alert fatigue (33 items)** | Usability | P1/P2/P3 bands, owner filter, snooze; Later list collapsed |
